## Huayu joins the Zhaga Consortium as a Regular Member

Huayu has become a Regular Member, of the Zhaga Consortium, reinforcing our global membership working to advance open, standardised interfaces for LED luminaires and their components.

“The Zhaga Consortium has always been at the forefront of the global lighting industry,” said Liu Yuhang, project manager of Huayu. “Joining Zhaga marks a significant milestone for Huayu in its journey toward the international market. We look forward to collaborating with Zhaga to promote the standardisation of product interfaces and to contribute our professional expertise to innovation and the sustainable development of the lighting industry.”

Huayu’s decision to join Zhaga underlines the increasing importance of internationally recognised interface standards as lighting products and supply chains continue to globalise. Through its participation as a Regular Member, the company will contribute to Zhaga’s collaborative work on interface specifications designed to support compatibility, long-term serviceability, and sustainable product design.

“Huayu’s membership reflects the growing engagement of companies from across the global supply chain in Zhaga’s standardisation work,” commented Heinrich Thye, Secretary General of Zhaga. “Their involvement supports our objective of developing open interfaces that enable interoperable, future-ready lighting solutions worldwide.”

Huayu joins a global network of more than 600 members dedicated to standardise interfaces of components for LED luminaires.

---

### About Huayu

Founded in 2011, Huayu has focused on the production and manufacturing of high quality PCB and LED modules. Its products are widely used in LED lighting, power modules, automotive electronics, security, communications, medical and other fields. <https://www.huayucircuits.com>

### About the Zhaga Consortium

The Zhaga Consortium is a global lighting-industry organisation that develops open, standardised interfaces for LED luminaires and their components. Zhaga standards enable interoperability, serviceability, and future-ready lighting systems across indoor and outdoor applications. [zhagastandard.org](http://zhagastandard.org)
